About

An Angular project that builds a Front-End application to display a page to register and preview an event.

App is running at https://egzontina.github.io/event-planner/.

Installing and running for the first time locally

1. On root of the project run:

```
npm i
```

2. Start the server:

```
ng serve
```

3. Navigate to

```
http://localhost:4200/
```

Development Process

Project Creation & Setup

This project is generated with Angular CLI version 8.3.26.

Main Dependencies: 1. Angular Material (@angular/material) 2. Angular Flex-Layout (@angular/flex-layout)

Project Structure

```
|-- app
  |-- components
    |-- event
        |-- [+] add-event
        |-- [+] preview-event
        |-- event [+]
        |-- event.service.ts
    |
  |-- shared
      |-- [+] header
      |-- [+] footer
      |-- [+] models
      |-- icon.service.ts
    |
  |-- [+] environments
|-- assets
    |-- [+] icons
    |-- ...
```

Deploy the app to GitHub Pages

Using angular-cli-ghpages: 1. Create the dist folder for the project and run it

```
ng deploy --base-href=/event-planner/
```

IDE

Example is runnable from WebStorm IDE.
